

Ken Angelo Ardiente

Cebu City, Cebu, Philippines | +63 976 078 9115 | kenangeloardiente@gmail.com

PROFESSIONAL SUMMARY

Versatile and detail-oriented Software Engineer with a strong foundation in full-stack and web development, system integration, and scalable application design. Proven ability to deliver end-to-end solutions across web, mobile, and IoT environments, utilizing technologies such as C#, React.js, Java, and Node.js. Passionate about creating practical, user-centric solutions and eager to leverage skills in software development, data-driven technologies, and intelligent systems to build innovative products.

PROFESSIONAL EXPERIENCE

Software Engineer <i>NPAX - Cebu Corporation</i>	June 2025 - Present
- Designed and deployed enterprise-grade applications for diverse clients using C#, ASP.NET, Java, and MSSQL, architecting scalable system solutions, database schemas, and seamless integration between handheld devices and web-based systems. - Resolved complex software and system issues through structured troubleshooting across C#, AngularJS, and Node-RED environments, ensuring consistent stability and uptime across all deployments. - Enhanced production systems by refactoring legacy codebases and developing new modules in C# and ASP.NET, implementing performance optimizations to improve application efficiency and maintainability. - Developed Grafana dashboards and reporting tools to monitor system performance and support data-driven decision-making. - Handled deployment, configuration, and client training, ensuring smooth system adoption and user connectivity. - Maintained and enhanced Android applications using Java and Android SDK, modernizing user interfaces, integrating RESTful APIs for seamless backend communication, and resolving system bugs to improve overall application stability and user experience. - Collaborated with cross-functional teams to manage system updates, troubleshoot operational issues, and support technical requirements.	

Software Engineer Intern <i>NPAX - Cebu Corporation</i>	January 2025 - May 2025
- Developed full-stack modules for NXPERT EON using AngularJS and Node-RED, supporting real-time production tracking. - Contributed to IoT-integrated workflows for manufacturing systems, ensuring accurate and efficient data capture. - Assisted in debugging, testing, and improving system functionality across multiple modules, including MPR, DPR, Pallet Loading, and Layout.	

PROJECTS

NXPERT EON - Enterprise Resource Planning Traceability System
- Developed an IoT-enabled ERP system using Node-RED and AngularJS, integrating sensors and barcode scanners for real-time production traceability and accurate data capture. - Designed system workflows, data pipelines, and MSSQL database structures to ensure reliable and accurate data processing across manufacturing operations. - Built interactive dashboards and visualizations using Grafana and AngularJS to monitor production operations and support comprehensive reporting. - Reduced manual processes through automation, significantly improving productivity, data accuracy, and overall operational efficiency in manufacturing.

NXPert One - Handheld Device (Warehouse Management System)

- Engineered a first-of-its-kind integration connecting handheld devices to an existing partner company system using C# and PostgreSQL, establishing reliable cross-platform communication and data synchronization where no prior integration existed.
- Architected system workflows and database interactions, designing robust data synchronization processes to guarantee accurate and consistent data exchange across platforms.
- Maintained and enhanced application logic using C#, identifying and resolving bugs while adapting functionality to meet changing client needs.
- Sustained system reliability and performance through continuous maintenance, proactive enhancements, and effective resolution of technical issues.

AKN Music Portfolio Website - Music Portfolio & Content Management Platform

<https://akn-artist-website.vercel.app/>

- Developed a responsive music portfolio website using React and Supabase, featuring AKN's released music, events, performances, and multimedia content.
- Implemented music showcase and event pages to organize released songs, upcoming events, performances, and other band activities.
- Integrated video embedding to display music videos, live performances, and other multimedia content directly on the website.
- Developed an admin content management interface that enables administrators to upload, manage, and update songs, events, videos, and website content without modifying the frontend code.
- Integrated Supabase backend services for data storage and content management, enabling efficient synchronization between the admin dashboard and public-facing website.

Empathease - Platform for Access to Mental Health Providers and Support Services

- Served as a Full Stack Developer, designing and developing backend APIs using Node.js and Express to handle core application logic and data processing.
- Built responsive frontend components using React and developed Android application features using Kotlin, ensuring seamless integration across platforms.
- Designed and documented system architecture, including creation of Entity Relationship Diagrams (ERDs) and data models.
- Analyzed, structured, and optimized end-to-end program workflows to improve system efficiency, scalability, and maintainability.

Itinerawise - Android Application for Creating and Managing User Itineraries

- Served as an Android Developer, integrating server APIs to enable seamless communication between backend services and the mobile application.
- Developed and enhanced frontend components within the Android app, focusing on performance, usability, and responsive design.
- Collaborated on UI/UX improvements to deliver a user-friendly and efficient interface.
- Ensured smooth data flow and application reliability through testing, debugging, and optimization.

EskwelaBuy - Buy and Sell Android Application (Kotlin, PHP Laravel)

- Served as a Full Stack Developer, building a buy-and-sell Android application with Kotlin (frontend) and PHP Laravel (backend).
- Designed and implemented end-to-end program workflows and developed a comprehensive data dictionary to define system data structures.
- Developed intuitive and user-friendly mobile interfaces, focusing on usability and overall user experience.
- Implemented backend logic, database management, and API endpoints using Laravel.
- Integrated the Android application with backend services to ensure seamless data exchange and reliable system performance.

PSITS - Banilad Web-Based POS

- Contributed as part of the System Analysis Team for a web-based POS system, supporting early-stage system design and planning.

- Collaborated in brainstorming sessions to define features aligned with business requirements and user needs.
- Designed program workflows to map system processes and ensure logical, efficient operations.
- Developed a detailed data dictionary and created Entity Relationship Diagrams (ERDs) to define data structures and relationships.
- Helped establish a solid system foundation by aligning technical design with business and customer requirements.

EDUCATION

Bachelor of Science in Information Technology

2021 - 2025

University of Cebu - Banilad | Magna Cum Laude

Senior High School, ICT Programming

2019 - 2021

University of Cebu - Banilad

TECHNICAL SKILLS

Programming Languages: Java, Python, C#, Kotlin

Frontend Technologies: React.js, AngularJS, HTML, CSS, Tailwind CSS, PHP

Backend Technologies: Node.js, Express.js, Laravel PHP, Node-RED

Databases: MongoDB, Firebase, Supabase, MySQL, MSSQL, PostgreSQL

LEADERSHIP EXPERIENCE

- Public Information Officer, PSITS - Banilad (S.Y. 2023 - 2024)
- Auditor, PSITS - Banilad (S.Y. 2022 - 2023)
- Media Officer, UC Academic Scholars' Alliance (S.Y. 2022 - 2023)
- First Year Representative, PSITS - Banilad (S.Y. 2021 - 2022)

WORKSHOPS AND SEMINARS

- Customer Journey Mapping - CebUXD
- ChillUX - CebUXD
- TechEx: Code and Connect - Hatchit Solutions
